

Creating a VPN Connection in Windows 7

- * Default PPTP encryption may need to be adjusted for successful connection

 See Security Changes for Remote Access Scenarios (VPN), under Flint Networking Tech Docs
- Click on Control panel and open Network and Sharing Center
- Click Setup a new connection or network

Select Connect to a Workplace (VPN)

• Select <u>Use My Internet Connection</u> (VPN)

- Enter Internet Address (IP Address or DNS Name)
- Enter <u>Destination Name</u> (Friendly name. i.e. Office VPN)
- Check Don't Connect Now

<Next>

• Do not enter any information here

• Click Create then Close

Network and Sharing Center

- Click Change Adapter Settings (Upper left)
- Right-Click on your VPN Connection and Select Properties

- Click on the <u>Security</u> tab
- Change Type of VPN to PPTP
- Authentication configured as pictured (Remove (CHAP))
 - ➤ Allow these protocols

Remove all checks except for Microsoft CHAP Version 2 (MS-CHAP v2)

- Click the <u>Networking</u> tab
- Uncheck Internet Protocol Version 6
- Select Internet Protocol Version 4 and click Properties

- Click Advanced
- Uncheck Use Default Gateway on Remote Network
- Then Click OK 3 times

Network Connections

- Right-Click on your <u>VPN Connection</u>, select <u>Create Shortcut</u> and click <u>Yes</u> * A shortcut will be created on your <u>Desktop</u>
- Double-click the VPN shortcut on the desktop
- Enter your <u>Username</u> and <u>Password</u>
- DO NOT SELECT <u>Save Password</u> (This is for increased security)
- Click Connect

• When completed you will be securely connected to your office network
